

GOVERNMENT COLLEGE OF ENGINEERING AURANGABAD

“In Pursuit of Global Competitiveness”

(An Autonomous Institute of Government of Maharashtra)

Department: Information Technology

Program Educational Objective(s)

After graduation and few years of graduation, the (Information Technology) graduates would

PEO I	Interpret, design and analyze data for effective problem solving
PEO II	Pursue advanced studies to adapt to current trends
PEO III	Attain professional careers and provide services in societal and environmental context for sustainable development
PEO IV	Work successfully with effective communication skills, professionalism, team work and ethical attitude

Program Outcome(s)

The program enables students to achieve by the time of graduation:

1. An ability to apply principles and methodologies of mathematics, science, and engineering fundamentals
2. An ability to identify, study research literature, formulate the computing requirements appropriate to its solution
3. An ability to design solutions for engineering problems and design systems or processes that meet specified needs with appropriate considerations
4. An ability to conduct investigations of complex problems including design of experiments, analysis and interpretation of data to provide valid conclusions
5. An ability to create, select and apply appropriate techniques, resources, and modern engineering and IT tools with an understanding of the limitations
6. An understanding of professional engineering practice with concern to societal, health, safety and legal responsibilities
7. Recognize the impact of IT solutions in an environmental and societal context and demonstrate knowledge of and need for sustainable development
8. Understand and commit to professional ethics and responsibilities and norms of engineering practice

9. An ability to function effectively as an individual and as a member or leader in a team to accomplish a common goal
10. Communicate effectively to comprehend and write effective reports, design documentation and make effective presentations
11. An ability to engage in independent and life-long learning to enhance their careers for continuing professional development
12. An understanding of engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects

Mapping of PEOs and POs

Programme Educational Objective(s)	Program Outcome(s)	
PEO I	Interpret, design and analyze data for effective problem solving	1,2,3
PEO II	Pursue advanced studies to adapt to current trends	3,4,5,6,7,9
PEO III	Attain professional careers and provide services in societal and environmental context for sustainable development	4,5,6,7,8,9,10,11,12
PEO IV	Work successfully with effective communication skills, professionalism, team work and ethical attitude	6,8,10,11,12

IT2031:Digital Electronics & Microprocessor	
Teaching Scheme Lectures: 3Hrs/Week Credits :03	Examination Scheme Test-1 : 15 Marks Test-2 :15 Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks

Prerequisites: MA1001: Maths

Course description: This course introduces binary arithmetic, fundamentals of digital circuits, and their applications. Also fundamental concepts of 8086 microprocessor, architecture , instruction set and assembly Language Programming of 8086.

Course Objectives:

1. To train the students on fundamentals of digital electronics.
2. To train the students for minimization of digital circuit.
3. To study combinational and sequential Logic Design (Multiplexer, Demultiplexer, Counters, Registers).
4. To learn architecture, instruction set, interrupt structure of 8086 microprocessor.
5. To learn assembly language programming of 8086.

Course Outcomes

After completing the course, students will able to:

CO1	Perform binary arithmetic , explain logic gates, universal gates, K-map.
CO2	Differentiate between Combinational and Sequential Logic Design.
CO3	Discuss Registers, Counters
CO4	Present the fundamental concepts of 8086 microprocessor, their architecture, instruction set, and interrupt structure.
CO5	Use assembly language programming of 8086.

Detailed Syllabus:

Unit 1	Binary arithmetic, Logic Gates, Boolean algebra: Binary arithmetic, 2's complement arithmetic, Gray code, Excess three codes, error detecting and correcting codes. Basic gates, Universal gates and their truth tables, De-Morgan's theorem. Combinational circuit design K-Map minimization, don't care condition, Binary half and full adders and subtractors, BCD to Seven Segment decoder, binary to gray and gray to binary conversion. Quine-McClusky minimization technique. Multiplexers, cascading of multiplexers, Demultiplexers, cascading of Demultiplexers, Binary and BCD Adders.
Unit 2	Flip-Flops, Sequential Logic Design Flip-flops - One bit memory cell, Clocked SRFF, JKFF, D- Type, T-type FF, Application of Flip-flops. Introduction to registers, shift registers, universal registers, application of shift registers as ring counters, twisted ring counter.
Unit 3	Counters : Ripple or Asynchronous Counters, Modulus of Counters, Introduction to general purpose 54/74 series, Asynchronous IC's, Cascading of ripple counter IC's, Synchronous counters, up/down counters.
Unit 4	Introduction to Microprocessor: Introduction to 16 bit microprocessor, Architecture and Pin diagram of 8086, Programmers model of 8086 (Registers), Segmentation, logical to physical address translation, even and odd memory banks, Read write cycle timing diagrams.
Unit 5	Addressing modes & Instruction Set: Addressing modes, Instruction set of 8086 in detail, Instruction Formats, Stacks, Assembler, Linker, Debugger (Turbo debugger), Directives, Procedures (Near & Far), Macros, Loop constructs, 8086 Programming examples. 8086 Interrupts: 8086 Interrupt Structure, Interrupt Vector Table (IVT), ISR.

IT2032:Data Structure	
Teaching Scheme Lectures: 03 Hrs/Week Credits:03	Examination Scheme Test I : 15 Marks Test II : 15 Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks

Prerequisites: CS1001: Basics of CS & IT

Course description:

This course covers some of the general-purpose data structures and algorithms, and software development. It is aimed at helping you understand the reasons for choosing structures or algorithms. Topics covered include managing complexity, abstraction, analysis, vectors, lists, queues, trees, heaps, hash tables maps, and graphs.

Course Objectives:

1. To train the students on fundamentals that one must learn of data structures
2. To train the students for a strong foundation for programming using data structures

Course Outcomes

After completing the course, students will able to:

CO1	Interpret and compute asymptotic notations of algorithms to analyze the consumption of resources (time/space).
CO2	Describe and explain data structure: arrays, records, strings, linked list, stacks and queues.
CO3	Compare the searching algorithms and sorting algorithms.
CO4	Identify and model graph algorithms like DFS, BFS, shortest path, spanning tree.

Detailed Syllabus:

Unit 1	Sorting & searching Different sorting tech, classification on the basis of big-O notation, tech such as straight selection sort, bubble sort, merge sort, quick sort, heap sort, shell sort, radix sort, comparisons between different sorting techniques, Sequential searching, index Sequential searching binary searching.
Unit 2	Introduction to data structure, The Stacks& Queues The Arrays as an ADT: Using One-Dimensional Arrays, Using Two-Dimensional Arrays, Using Multidimensional Arrays, Definition and Examples, Primitive Operation, The stack as an ADT, The queue and its sequential representation, The queue as an ADT, Basic Definition and examples: Infix, Postfix, and Prefix, Program to evaluate a Postfix expression, Limitations of the program, Circular Queue, priority queue
Unit 3	Linear Data Structure & their representation : Definition, concept, operation on linked lists, Circular linked lists Doubly linked lists, Operations like insertion, deletion, insertion in order, searching, updating , Applications of linked lists such as polynomial manipulation, Comparison of singly linked, circularly linked & doubly linked list
Unit 4	Definition, Basic terminology, operation on binary trees, linked storage representation for binary search trees, Basic operation on binary search tree such as creating a binary search tree, searching, modifying an element, inserting & deleting the element, destroy a binary search tree, tree traversals ,in-order, pre-order, post-order , tree application for expression evaluation & for solving sparse Matrices, Huffman code algorithm, height balanced trees2-3 tree, B trees, B+ trees, AVL trees
Unit 5	Graph: Definitions, basic terminology, matrix representation & implementation of graphs, graph travels, DFS, BFS, Shortest path, spanning tree

Prerequisites: CS1001: BCOMP & IT, MA1001: Maths

Course description: This course gives description about computer graphics applications. Subject overviews about different line drawing algorithms. It introduces 2D and 3D transformations for graphics programming.

Course Objectives:

1. To introduce basic concepts of Computer graphics.
2. To study line drawing algorithms.
3. To understand line clipping and polygon clipping.
4. To study animation techniques.

Course Outcomes

After completing the course, students will be able to:

CO1	Remember the basic concepts of graphics with line drawing algorithms.
CO2	Identify transformation methods.

CO3	Apply clipping and segmenation techniques.
CO4	Examine use of color models, shading and animation.
CO5	Analyze the curve generation and use of graphics tools.

Detailed Syllabus:

Unit 1	Basics of Computer Graphics Introduction of computer graphics , Raster scan & Random scan displays, Display Files, Plotting Primitives: Scan conversions, lines, line segments, vectors, pixels and frame buffers, vector generation. Line drawing Algorithms: DDA, Bresenham. Circle drawing Algorithms: DDA, Bresenham. Character Generation: Stroke Principle, Starburst Principle, Bit map method, Introduction to aliasing and anti-aliasing. Polygon and its types, inside test, polygon filling methods: Seed fill, Scan Line, Flood fill and Boundary fill.
Unit 2	Graphical Transformations 2-D transformations ,homogeneous coordinates and matrix representation of 2-D transformations,other 2-D transformations: reflection and shear, 3D transformations : Translation, scaling, rotation, rotation about X, Y, Z and arbitrary axis reflection about XY, YZ, XZ and arbitrary plane. Projections: Types Parallel - Oblique: Cavalier, Cabinet and orthographic :Isometric, Dimetric, Trimetric and Perspective - Vanishing Points as 1 point, 2 point and 3 point.
Unit 3	Windowing ,Clipping and Segments Introduction, Segment table, Segment creation, closing, deleting and renaming, Visibility Concept of window and viewport, viewing transformations, Line Clipping: Cohen Sutherland Method. Polygon Clipping : Sutherland Hodgman method for clipping convex and concave polygons

Unit 4	Shading and Animation Color Models – RGB, YIQ, CMY, HSV, Shading: Halftoning, Gouraud and Phong Shading Computer Animation: Animation sequences, functions & Languages, Key-frame Systems, Motion Specifications, Introduction to OpenGL ES.
Unit 5	Curves and Fractals Introduction, Curve generation, Interpolation, interpolating algorithms, interpolating polygons, BSplines and corners, Bezier curves, Fractals, fractal lines and surfaces . Interactive Graphics & usage of the tools of computer graphics – 3D Studio and Maya or Blender.

IT2034 :Digital Electronics & Microprocessor lab	
Teaching Scheme Practical: 2Hrs/Week Credits :01	Examination Scheme Term Work : 50 Marks Practical Examination & Viva : 25 Marks

Course Outcomes Expected: After successful completion of the course, students will be able to:

CO1	Implement functions with logic gates.
CO2	Demonstrate the concepts half and full adder and subtractors , analyze the code conversion circuit of gray to binary and binary to gray,
CO3	Illustrate the concepts of various multiplexer, de-multiplexer.
CO4	Demonstrate arithmetic operators by using MASM
CO5	Implement logical and string operations

Suggestive List of Practical's:

Sr. No.	Details
Level: Basic (all)	
1	To study the logic gates & verify the truth table.
2	To study & verify the truth table for half adder, full adder, half subtractor, full subtractor.
3	To implement BCD adder.
4	Arithmetic operations –Addition and Subtraction, Multiplication and Division , BCD – arithmetic operation
5	Logic operations –converting packed BCD to unpacked BCD, BCD to ASCII conversion
Level: Moderate (any three)	
6	To study & verify the code conversion circuits Binary to Gray Code, Gray to binary.

7	To study multiplexer/demultiplexer circuit and verify their truth table.
8	To study registers and verify their summary table.
9	String operations-Move/exchange Block, Reverse string, , Length of the string, String comparison.
10	To find smallest/largest number within an array.
Level: Complex (any two)	
11	To implement up/down counter, mod counter
12	To implement bidirectional shift registers.
13	To sort array in ascending /descending order.
14	To implement string concatenation, string palindrome

Teaching Scheme Practical: 02Hrs/Week Credits:01	Examination Scheme Term Work : 25 Marks Practical Examination & Viva Voce: : 25 Marks

Laboratory Course Outcomes

As an outcome of completing the Laboratory course, students will able to:

CO1	To implements the algorithms including various operations on queues, stacks, linked list, trees, graphs, sorting, searching on real time application.
CO2	Design and implement abstract data types with static or dynamic representation.
CO3	Analyze, evaluate and Design appropriate data types and algorithms for solving particular problems

List of Experiments

Sr. No.	Details
	Level : Easy
1	Program for Bubble Sort and Bucket Sort.
2	Program for Merge Sort and Heap Sort.
3	Program for Insertion Sort and Quick sort.
4	Program for Binary Search to search an element in the given sequence
	Level : Moderate
5	Program to implement two stacks in the one array.
6	Program for implementing Stack and Queue.
7	Program for implementing Singly Linked List and Doubly Linked List.
8	Program for implementing Circular Queue using Linked List.
9	Program for Creation of Binary Tree and operations on it.
	Level : Complex

10	Program for Creation of Binary Threaded Tree.
11	Program for Depth First search and Breadth First search.

Note: Experiment will be implement using turbo c/ gcc compiler

IT2036 : Lab- Computer Graphics	
Teaching Scheme Practical: 02 Hrs/Week Credits:01	Examination Scheme Term Work : 25 Marks Practical Examination & Viva Voce: : 25 Marks

Prerequisites: CS1001: BCOMP & IT, MA1001: Maths

Course Objectives:

1. To learn basic concepts of Computer Graphics.
2. To study the various algorithms for generating graphical figures.
3. To summarize mathematics behind the graphical transformations
4. To understand various methods regarding projections, animation, shading.

Laboratory Course Outcomes

As an outcome of completing the Laboratory course, students will able to:

CO1	Identify functions of graphics editor with graphics packages.
CO2	Apply and implement line drawing and circle drawing algorithms to draw specific shape given in the problem.
CO3	Identify geometrical transformations for given input shape.
CO4	Formulate various polygon filling methods for given input polygon.
CO5	Analyze Fractals clipping algorithms, animation on the given object and apply any graphics tool.

List of Experiments

Sr. No.	Details
	Level : Easy
1.	Implement a program to draw and color all the basic shapes in graphics editor.
2.	Implement a program for DDA Line drawing Algorithm with any pattern.
3.	Execute a program for Bresenham's Line drawing Algorithm with any pattern.
4.	Simulate a program for Bresenham's circle drawing Algorithm with 4X4 chessboard rotated 45° with the horizontal axis.
	Level : Moderate
5.	Develop a program for one pattern (or use above chessboard) by polygon filling.
6.	Execute a program for seedfill algorithm by polygon filling.
7.	Implement a program for 2 D transformation by using specific pattern.
8.	Implement a program for other transformations like Reflection and Shear.
	Level : Complex
9.	Implement Cohen Sutherland Hodgman algorithm to clip any given polygon.
10.	Generate fractal patterns by using Koch curves.
11.	Execute animation assignments like National Flag hoisting.
12.	Usage of the computer graphics tools. (Maya/Blender).

Special Instructions if any: All the assignments should be conducted preferably using OpenGL/ Linux platform/ C/C++.

CO1	Understand the basic features of object-oriented programming.
CO2	Design, implement, and test the implementation of friend function and constructors .
CO3	Implement the concepts of overloading and overriding methods and contrast them.
CO4	Make use of object oriented concept like virtual function, inheritance, polymorphism.
CO5	Formulate a software application and propose an object oriented design.

Suggestive List of Practical

Sr. No.	Details
Level: Basic (all)	
1	Implement program using Structure
2	Program which shows use class and Objects.
3	Program for Static Data Members and Member functions.
4	Program for friend function and inline function.
5	Write a program to demonstrate different types of constructors
6	Write a program for overloading various binary operators.
7	Write a program to implement to implement the Use of “this” Pointer.
Level: Moderate (any four)	
8	Program using streams
9	Write a program for Multilevel and multiple inheritances..
10	Write a program for Hierarchical and hybrid inheritance.
11	Write a program for polymorphism (virtual function).
12	Program using manipulators.

13	Program for User Defined Manipulators
Level: Complex (any one from 10,11,12)	
10	Implementation of any Data structure using object oriented language.
11	Program using files (open function method)
12	Program using files(constructor method)
13	Mini Project in C++

Note: Experiment will be perform in Visual Studio/Turbo C++/ JDK

IT2001: Professional Ethics and Cyber Laws

Teaching Scheme	Examination Scheme
Lectures: 3 Hrs/Week	Test I : 15 Marks
Credits: 3	Test II : 15 Marks
	Teachers Assessment : 10 Marks
	End Semester Exam : 60 Marks

- To make students familiar with the fundamental concepts of computer ethics
- To know the linkage between computer, professional, philosophical ethics and decision making
- To develop the concepts in computer forensics
- To introduce the linkage between technology, law and ethics

Course Outcomes:

After completion of this course students will be able to:

CO1	To makes students familiar with the fundamental concepts of computer ethics.
CO2	To know the linkage between computer, professional philosophical ethics and decisions making.
CO3	Identify the cyber threats
CO4	Illustrate tools and methods used in Cyber crime
CO5	Make use of information and data to serve as digital evidence

Unit 1	An Overview of Ethics.Ethics for IT Professionals and IT UsersFOUNDATIONS of Information Ethics. Ethical Issues Involving Computer Security: Hacking,Hacktivism, and Counterhacking.Identify some of the basic content in the field of Computers, Information Systems, Ethics, Society and Human Values.
Unit 2	Ethical Decision Making: Types of ethical choices, Making defensible decisions, Ethical dilemmas, law and ethics. Crime incident Handling Basics: Hacking, cyber activism, Tracking hackers, clues to cyber crime, privacy act, search warrants, common terms, organizational roles, procedure for responding to incidents, reporting procedures, legal considerations

	Information Technology Act 2000 Scope, jurisdiction, offense and contraventions, powers of police, adjudication
Unit 3	Introduction: Cybercrime and Information Security, Cybercriminals, Classifications of Cybercrimes Cyberoffenses How Criminals Plan the Attacks, Social Engineering, Cyberstalking, Cybercafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Attack Vector
Unit 4	Constitutional & Human Rights Issues in Cyberspace, Freedom of Speech and Expression in Cyberspace, Right to Access Cyberspace Access to Internet, Right to Privacy, Right to Data Protection, Cyber Crimes & Legal Framework, Cyber Crimes against Individuals, Institution and State, Hacking , Digital Forgery, Cyber Stalking/Harassment, Cyber Pornography, Identity Theft & Fraud, Cyber terrorism, Different offences under IT Act 2000.
Unit 5	Cyber Law -Need for Cyber Law, International Perspectives, Cyber Jurisprudence at International and Indian Level, Dispute Resolution in Cyberspace, Cyber Torts: Cyber Defamation, Different Types of Civil Wrongs under the IT Act 2000, Intellectual Property Issues in Cyber Space: Interface with Copyright Law, Interface with Patent Law, Trademarks & Domain Names Related issues. Concept of Jurisdiction Indian Context of Jurisdiction and IT Act.2000, International Law and Jurisdictional Issues in Cyberspace.

IT2021: Object Oriented Programming

Teaching Scheme Lectures: 3Hrs/Week Credits :03	Examination Scheme Test I : 15 Marks Test II : 15 Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks
--	--

Total Hours required for this course: 30 Hours.

Prerequisites: CS1001: BCOMP & IT, IT2037: S/W LAB I

Course Description: Object Oriented Programming is designed to create sophisticated programs to solve real-time problems using object oriented approach. The course emphasizes to improve the logical thinking of the students.

Course Educational Objectives:

- To enable the students to understand the core principles of the Object Oriented Language.
- To understand the concept of Multi-threading.
- To understand the concept of Exception Handling.
- Introduce the students to database connectivity.
- Introduce the students to Java EE.

Course Outcomes:

After completion of this course students will be able to:

CO1	Illustrate Object oriented principals using Object Oriented programming language's.K1
CO2	Develop programs using Inheritance, Interfaces. Multithreading.K2
CO3	Develop programs using Exception handling.K2
CO4	Develop application using database .K2
CO5	Illustrate the basics of Java Enterprise Edition.K3
Unit 1	Abstract Data types: Evolution of OOP,Features of OOP, Syntax and Semantics of OO Programming language in C++, Java, C#
Unit 2	Concurrency: Subprogram level concurrency, semaphores, monitors, message passing,

	Java threads, C# threads
Unit 3	Exception handling: Exceptions, exception Propagation, Exception handler in C++ ,Java and C#, Packages ,Namespace
Unit 4	Database connectivity: JDBC and Database Programming: Introduction to JDBC, JDBC Drivers, creating DSN, The java.sql package, PreparedStatement class, CallableStatement object, Scrollable Resultset, Updatable Resultset Database Connectivity using c#:Connecting to Database and Connection Pooling
Unit 5	Introduction to Java Enterprise Edition: Need for J2EE, Advantages of J2EE, Types of Enterprise Architecture, Architecture of J2EE, J2EE Components, J2EE Containers, J2EE Technologies

IT2038: Discrete Mathematical and Structures	
Teaching Scheme Lectures: 03 Hrs/Week Tutorial:01 Hrs/Week Credits:04	Examination Scheme Test-I : 15 Marks Test-II : 15 Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks

Course Description: Discrete Mathematics deals with objects that are discrete. It is the fundamental mathematics for digital computer and all fields of computer science. Topics covered in the course include proof techniques, logic and sets, functions, relations, graph tree and algebraic techniques, probability and recurrences.

Course Objective:

1. To make students familiar with correct mathematical terminologies and notations
2. To understand sets, functions, relations, graphs and trees used in computer algorithms
3. To familiarize logical reasoning to solve a variety of problems.
4. To impart formal proof techniques

Course Outcomes: After successful completion of the course, students will be able to:

CO1	Describe basics of sets, relations, functions and recursion
CO2	Use logical reasoning to solve the problems
CO3	Explain and apply permutations and combinations
CO4	Practice problems based on graphs and trees

CO 5	Apply the concepts to various applications to find effective solution
------	---

Detailed Syllabus:

Unit 1	Sets, Combinations of sets, Finite and Infinite sets, Uncountably infinite sets, Mathematical Induction, Principle of inclusion and exclusion, Multisets, Propositions, Logical Connectives, Conditionals and Biconditionals, Logical equivalences, Euclidean Algorithm	6 Hrs
Unit 2	Relations, Properties of Binary Relations, Closure of relations, Warshall's algorithm, Equivalence relations and partitions, Partial ordering relations and lattices, Chains and Anti chains, Functions, Recursive functions, Pigeon hole principle., Recurrence relation, Linear Recurrence Relations With constant Coefficients, Homogeneous Solutions, Total solutions, solutions by the method of generating functions	6 Hrs
Unit 3	Permutations and Combinations: rule of sum and product, Permutations, Combinations, Algorithms for generation of Permutations and Combinations. Discrete Probability, Conditional Probability, Bayes' Theorem, Information and Mutual Information	6 Hrs
Unit 4	Graphs & Trees Basic terminology, multi graphs and weighted graphs, Eulerian paths and circuits, Hamiltonian paths and circuits, Factors of a graph, planar graph graphcoloring. Trees, rooted trees, path length in rooted trees, binary search trees, spanning trees and cut sets	6 Hrs
Unit 5	Algebraic Systems: Algebraic Systems, Groups, Semi Groups, Monoids, Subgroups, Permutation Groups, Codes and Group codes, Isomorphism and Automorphisms, Homomorphism and Normal	6 Hrs

	Subgroups, Rings, Integral domain and Fields.

IT2039 Data Base Management System	
Teaching Scheme Lectures: 03 Hrs/Week Credits:03	Examination Scheme Test I : 15 Marks Test II : 15 Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks

Prerequisites: EM-III

Course Description: Database Management System. In short, a DBMS is a database program. Technically speaking, it is a software system that uses a standard method of cataloging, retrieving, and running queries on data. The DBMS manages incoming data, organizes it, and provides ways for the data to be modified or extracted by users or other programs. Some DBMS examples include MySQL, PL/SQL, Microsoft Access, SQL Server, FileMaker, Oracle, RDBMS, dBASE and FoxPro. Since there are so many database management systems available, it is important for there to be a way for them to communicate with each other

Course Educational Objectives:

1. To recognize the different issues involved in the design and implementation of a database system.
2. Realize and successfully apply logical database design principles, including E-R diagrams and database normalization.
3. To identify and use data manipulation language to query, update, and manage a database
4. To develop an understanding of essential DBMS concepts such as: database security, integrity, concurrency
5. To design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS

Course Outcomes

After completing the course, students will able to:

CO1	Analyze the basic concepts and architecture associated with DBMS
CO2	Convert entity-relationship diagrams into relational tables, populate a relational database and formulate SQL queries on the data
CO3	Apply normalization steps in database design and removal of data anomalies
CO4	Develop team spirit and professional attitude towards the development of database

	applications
CO5	Learn and implement the principles and concepts of information integrity, security and confidentiality

Detailed Syllabus:

UNIT-1	Introduction: What is Database? Necessity of database? DBMS, Examples, Characteristics of the Database Approach, Advantage of using a Database Approach, Database System Architecture, Data Models, Schemes and Instances, Data Independence, Database Languages and Interfaces, Database System Environment, Classification of Database Management Systems. Database users and administration
UNIT-2	<p>ER Models, Relational Models:</p> <p>Different types of integrity constraints-Primary Key, Unique , Foreign key, Check, Not Null, Super key, Candidate Key, E-R model- Entity, Entity set, Strong and Weak entity ,Entity-Relationship Diagrams, Entity-Relationship Design Issues, Weak Entity Sets, Attributes- Simple, Derived, Composite, Multi valued, Identifier, Relationship, Associative entity, Cardinality constraints, Degree of relationship. E-R diagram naming conventions and design issues. Examples, Extended E_R Features.</p> <p>Relational Models: the Relational Data Model, the Relational Algebra: Fundamental Relational-Algebra Operations, Additional Relational-Algebra Operations, Extended Relational-Algebra operations. ER-to-Relational Mapping</p>
UNIT-3	<p>Structured Query Language:</p> <p>Background, Structure of SQL Queries, Data Definition language-Create, alter, Describe, Drop, Truncate clause, create table using Integrity constraints Select clause, Set Operations, Functions-single row functions-general, conversion, date, character, Multiple row functions -Aggregate Functions, Group by clause, Having clause, Nested Sub queries, Complex Queries, Views, Modification of the Data-DML-Insert, Update, Delete, Different types of joins, Introduction to PL/SQL-Cursor, triggers, Procedures.</p>

UNIT-4	Database Designing: Relational Database Design: Features of Good Relational Designs, Atomic Domains and First Normal Form, Decomposition Using Functional Dependencies, Functional-Dependency Theory, Decomposition Using Functional Dependencies, Decomposition using Multi-valued Dependencies, More Normal Forms up to BCNF.
UNIT-5	Query Processing and Transaction Processing: Overview of Query Processing, Measures of Query Cost, Transaction Concept, Transaction State, Implementation of Atomicity and Durability. Introduction to NoSQL: CAP Theorem and BASE Properties, Types of NoSQL Database. Concurrent Executions, Serializability, Recoverability, Implementation of Isolation. Transaction support in SQL Concurrency control techniques, concurrency control based on timestamp based protocol, validation based protocol, deadlock handling, Database Recovery Techniques based on Immediate Update, Failure classification, Shadow Paging, Log based recovery, failure with loss of Nonvolatile Storage, Authorization and transaction control SQL clauses

IT2040: Data Communication and Networking	
Teaching Scheme Lectures: 3 Hrs/Week Credits :03	Examination Scheme Test-I : 15 Marks Test-II :15 Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks

Total Hours required for this course: 30 Hours.

Prerequisites: NIL

Course Description: After completing this course, students will understand fundamentals of Data communication and Networking. First and second unit introduces Network models and it also explores the telecommunication aspects of the physical layer in the Internet model. Third unit is devoted to switching and error detection and correction. The forth and fifth unit explores the data link layer and Medium Access Control sub-layer of the to data link control

Course Educational Objectives:

1. To explore Data communication, Networking , Protocols and Standards and Networking Models
2. To discuss issues related to physical layer and transmission medium.
3. To discuss services provided by data link layer.
4. To make the students understand error detection and correction.

Course Outcomes:

After completion of this course students will be able to:

CO1	Understand Data communication components and network structures.
CO2	Compare ISO-OSI model and TCP/IP model with their functionalities.
CO3	Identify and solve issues related to physical layer.
CO4	Make use of error correction/ detection techniques.

CO5	Classify Multiple Access Protocols and be familiar with IEEE standards.
------------	---

Unit 1	Introduction: Data Communication, Networks, Internet, Protocols and Standards, Network Models: OSI, TCP/IP analog and digital data, analog signal, digital signal, transmission impairments, data rate limits, performance.
Unit 2	Bandwidth Utilization and Transmission Media: Signal Conversion: digital-to-digital, analog-to-digital, analog-to-analog, digital-to-analog conversion, multiplexing, spread spectrum, guided media and unguided media
Unit 3	Switching and Error Detection - Correction Switching: circuit switched networks, datagram networks, virtual circuit networks, Types of errors, detection vs correction, block coding, linear block codes, cyclic codes, checksum, hamming code
Unit 4	Data Link Control Medium Access Framing, flow control and error control protocols, protocols: stop-and-wait, go-back-n, selective-repeat, piggybacking, HDLC and PPP.
Unit 5	Medium Access, Ethernet and LAN Random access: ALOHA, CSMA, CSMA/CD, CSMA/CA, controlled access, channelization, IEEE standards, different Ethernets, connecting devices, backbone networks, VLAN.

Teacher’s Assessment: Teachers Assessment of 10 marks is based on one of the / or combination of few of following

- 1) Simulation
- 2) Application development
- 3) Power point presentation of case studies
- 4) Question & answer / Numerical solution

5) Study of Industry processes and its presentation

Recommended Assessment Pattern:

Assessment Pattern Level No.	Knowledge Level	Test I	Test II	Teachers Assessment/ Assignment	End Semester Examination
K1	Remember	00	05	00	20
K2	Understand	05	05	05	10
K3	Apply	05	05	05	10
K4	Analyze	05	00	00	10
K5	Evaluate	00	00	00	10
K6	Create	00	00	00	00
Total Marks 100		15	15	10	60

Assessment table:

Assessment Tool	K1	K2	K3	K4	K5
	CO1,CO3	CO1	CO4	CO3,CO5	CO5
Class Test I (15 Marks)	05	05	05	00	00

OEIT2001: Basics Data Structure	
Teaching Scheme Lectures: 03 Hrs/Week Tutorial:00 Hrs/Week Credits:03	Examination Scheme Test I : 15Marks Test II : 15Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks

Prerequisites: CS1001: Basics COMP & IT

Course description:

This course covers some of the general-purpose data structures and algorithms, and software development. It is aimed at helping you understand the reasons for choosing structures or algorithms. Topics covered include managing complexity, abstraction, analysis, vectors, lists, queues, trees, heaps, hash tables maps, and graphs.

Course objectives:

- To acquaint student with: Algorithm analysis and its complexity.
- Data structure design methodologies and its implementation.
- Motivate students to use critical thinking skill to implement algorithms and data structures.

Course Outcomes

After completing the course, students will able to:

CO1	Interpret and compute asymptotic notations of algorithms to analyze the consumption of resources (time/space).
CO2	Describe and explain data structure: arrays, records, Pointer, stacks and queues.
CO3	Compare the searching algorithms and sorting algorithms.

CO4	Identify and model binary tree and file structure .
-----	---

<p>Unit 1: Introduction to Data Structure :Algorithms, performance analysis- time complexity and space complexity. Basic terminology, Elementary Data Organization, Definition of Data structure and Abstract data type, Classification of Data structures.</p>
<p>Unit 2: Arrays :Array Definition, Representation and Analysis, Single and Multidimensional Arrays, address calculation, application of arrays, Character String in C++, Character string operation, Array as Parameters. Pointer: Pointers Definition and declaration, Initialization; Indirection operator, address of operator; pointer arithmetic; dynamic memory allocation; arrays and pointers; function and pointers.</p>
<p>Unit 3: Stacks and Queue:Array Representation and Implementation of stack, Operations on Stacks: Push, Pop, Traverse. Linked Representation of Stack, Application of stack: Conversion of Infix to Prefix and Postfix Expressions, Evaluation of postfix expression using stack, Applications in recursion,Array and linked representation and implementation of queues, Operations on Queue: Create, Add, Delete, Full and Empty, Circular queues, D-queues and Priority Queues. Introduction of Link list</p>
<p>Unit 4: Searching, Hashing and Sorting :Sequential search, binary search, comparison and analysis, Hash Table, Hash Functions, Collision Resolution Strategies, Hash Table Implementation, Selection sort, Insertion Sort, Bubble Sorting, Quick Sort, Two Way Merge Sort, Heap Sort, Sorting on Different Keys, Practical consideration for Internal Sorting.</p>
<p>Unit 5: Binary Search Trees and File Structures:Binary Search Tree (BST), Insertion and Deletion in BST, Complexity of Search Algorithm, Path Length, AVL Trees, B-trees., Physical Storage Media File Organization, Organization of records into Blocks, Sequential Files, Indexing and Hashing, Primary indices, Secondary indices, B+ Tree index Files, B Tree index Files, Indexing and Hashing Comparisons.</p>

OEIT2002: Basics of Cyber Security	
Teaching Scheme Lectures: 3 Hrs/Week Credits: 03	Examination Scheme Test I : 15 Marks Test II : 15 Marks Teachers Assessment : 10 Marks End Semester Exam : 60 Marks

Course Educational Objectives:

- To make students familiar with the fundamental concepts of cyber security.
- To Identify the cyber threats
- To develop the concepts in computer forensics
- To make use of information and data to serve as digital evidence

Course Outcomes:

After completion of this course students will be able to:

CO1	To makes students familiar with the fundamental concepts of cyber security
CO2	To understand the different types of attacks
CO3	Identify the cyber threats
CO4	Illustrate tools and methods used in Cyber crime
CO5	Make use of information and data to serve as digital evidence

Unit 1	Introduction to cyber security. Defination,Computer Security,Necessity of Security,What to Secure?,Benefits of Computer Security Awareness,Losses due to Security Attacks,Different Elements in Computer Security, Cyber security strategies, Policies To Mitigate Cyber Risk. Introduction to Cybercrime,Cybercrime definition andoriginsoftheworld,Cybercrimeandinformation security,Classificationsof cybercrime,CybercrimeandtheIndian ITA2000, A global Perspective on cybercrimes.
Unit 2	How criminal plan the attacks,Social Engg, Cyber stalking, Cybercafe and Cybercrimes, Botnets, Attack vector, Cloud computing,Proliferation of Mobile and Wireless Devices, Trends in Mobility,Credit Card Frauds in Mobile and Wireless Computing Era, Security Challenges Posed by Mobile Devices, Registry Settings for Mobile Devices, Authentication Service Security, Attackson Mobile/Cell Phones, Mobile Devices: Security

	Implications for Organizations, Organizational Measures for Handling Mobile, Devices Related Security Issues, Organizational Security Policies and Measures in Mobile Computing Era, Laptop
Unit 3	Tools and methods used in cybercrime: Software Vulnerabilities: Phishing, password cracking, keyloggers and spywares, Viruses, Worms, and other Malware , steganography, DoS and DDoS attacks, SQL injection, Buffer overflow, Attacks on wireless network, Identity theft.
Unit 4	Cybercrimes and Cybersecurity: The Legal Perspectives, Introduction Cybercrime and the Legal , Landscape around the World,Why Do We Need Cyberlaws: The Indian Context, The Indian IT Act, Challenges to Indian Law and Cybercrime Scenario in India, Consequences of Not Addressing the, Weakness in Information Technology Act, Digital Signatures and the Indian IT Act, Amendments to the Indian IT Act, Cybercrime and Punishment,Cyberlaw, Technology and Students: Indian Scenario.
Unit 5	Understanding Computer Forensics:Introduction,Historical Background of Cyberforensics, Digital Forensics Science,The Need for Computer Forensics, Cyberforensics and Digital Evidence, Forensics Analysis of E-Mail , Digital Forensics Life Cycle, Chain of Custody Concept, Network Forensics, Approaching a Computer Forensics Investigation, Setting up a Computer Forensics Laboratory: Understanding the Requirements, Computer Forensics and Steganography, Relevance of the OSI 7 Layer Model to Computer Forensics, Forensics and Social Networking Sites: The Security/Privacy Threats Computer Forensics from Compliance Perspective, Challenges in Computer Forensics, Special Tools and Techniques, Forensics Auditing, Antiforensics.

IT2022: Lab Object Oriented Programming	
Teaching Scheme Practical: 2Hrs/Week Credits :01	Examination Scheme Term Work : 25 Marks Practical Examination & Viva: 25 Marks
CO1	Familiarize with Object Oriented programming Syntax , Semantics, compiling, debugging, linking and executing a program using the development environment
CO2	Use and apply Multithreading using OO programming languages
CO3	Use and apply Exception Handling using OO programming languages
CO4	Develop database applications to access and query a database
CO5	Illustrate the basics of Java Enterprise Edition

Suggestive List of Practical

Sr. No.	Details
Level: Basic (all)	
1	Install JDK,set the variables and write program to print message on the output screen
2	Install C#,set the variables and write program to print message on the output screen
3	Program to implement the concept of OOP's using C++
4	Program to implement the concept of OOP's using C#
5	Program to implement the concept of OOP's using Java
6	Program to implement the concept of database connectivity using Java
7	Program to implement the concept of database connectivity using C#
Level: Moderate (any four)	
8	Program to implement the concept of Virtual function in C++.
9	Program to implement the concept of Multithreading using java.
10	Program to implement the concept of Exception Handling using java.

11	Program to implement the concept of Multithreading using c#.
12	Program to implement the concept of Exception Handling using c#.
13	Program to implement the 2-tier architecture using J2EE.
Level: Complex (any one)	
10	Mini Project in C++
11	Mini Project in Java
12	Mini Project in C#

Note: Experiment will be perform in Visual Studio/ JDK/ Turboc++

Expected to solve all problems of simple level any four from Moderate and any one from complex level

IT2041 Lab-Database Management System	
Teaching Scheme Practical: 02 Hrs/Week Credits: 01	Examination Scheme Term Work : 25 Marks Practical Examination & Viva Voce: : 25 Marks

Laboratory Course Outcomes

As an outcome of completing the Laboratory course, students will able to:

CO1	Formulate and test SQL queries using SELECT FROM, WHERE, ORDER BY blocks
CO2	Recognize the need for logical operation, set operators, UNION, DISTINCT, LIKE, and use them appropriately.
CO3	Formulate and test queries using aggregate functions in SQL
CO4	Formulate and test of cursor and procedure in PL/SQL.

List of Experiments

Sr. No.	Details
Level: Basic (all)	
1	To Study different types of Oracle Data types
2	To Study different types of DDL commands.
3	To study different types of DML commands.
4	To study different integrity constraints
Level: Moderate (any three)	
5	To study different types SQL functions
6	To study subqueries.
7	To study views.
8	To study different types of joins
Level: Complex (any two)	
9	Study of Open Source Databases : MySQL
10	Design at least 10 SQL queries for suitable database application using SQL DML

	statements: Insert, Select, Update, Delete with operators, functions, and set operator
11	To study cursor and procedure in PL/SQL
12	To study trigger in PL/SQL
13	Mini Project

Note: Experiment will be perform in Oracle 11g

IT2042: Lab Software Lab II (ASP.NET)	
Teaching Scheme Practical: 2Hrs/Week Credits :01	Examination Scheme Term Work : 25 Marks Practical Examination & Viva Voce : 25 Marks

Laboratory Course Outcomes

As an outcome of completing the Laboratory course, students will able to:

CO1	Demonstrate secure web applications using ASP.Net
CO2	Ability to handle XML file and Database.
CO3	Create a simple website to demonstrate the use of rich controls for creating online

	registration form
CO4	Ability to create Advance programs using ASP.net which is required in IT industry
CO5	Ability to develop Web services

List of Practical

Sr. No.	Details
	Level: Easy
1	To Study the ASP.Net Introduction. Create a webform that allow users to upload files to the web server.
2	Create online registration form using rich controls
3	Design logon Web form and validate it
	Level: Moderate
4	Develop a web page to insert, delete & modify information stored in the database.
5	Create a feedback form having various choices and count obtained percentage of each choice
6	Develop a web application to read an XML document containing subject, mark scored, and year of passing into a Dataset.
	Level: Complex
7	Develop a webpage that displays data in graphical form, using the "Chart Helper".
8	To create advertisements using adRotator
9	Create a program using web service
10	Create a web form for Online test.
11	Mini Project

Note: Experiment will be perform in asp.net
